*** Notes of Significance ***

Fires highlighted in yellow have submitted a final ICS-209

[illegible]

Evening Brief

Date: Tuesday September 18th, 2018

Weather Summary

***** High Risk for Strong Winds and Low RH for parts of NV/UT/ID and Western WY Wednesday *****

Low pressure will push a cold front through the Great Basin this week. By Wednesday afternoon, the cold front will be draped across central Nevada and far northwest Utah into eastern Idaho, with gusty winds and low RH across the majority of Utah, western Wyoming, and southeast Idaho. Wind gusts 30-40 mph and RH 7-15%. See **High Risks** on the map. This is a mostly dry weather system, and so in the wake of the cold front relative humidity recovery will be less robust than usual and very little precipitation will accompany the weather system, however there will be some post frontal showers over Central Idaho into possibly far northeast Nevada. Isolated showers and thunderstorms are also possible Wednesday afternoon across far southeastern Utah.

Winds will decrease Thursday due to a brief appearance of high pressure, but winds will be quick to return towards the end of the week and this weekend ahead of a stronger cold front.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4
National	3

<i>Light Initial Attack Activity</i> GB New Fires and Acres: 11 fires 100 acres; 25,902 acres large fire growth
--

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been updated and issued for [Northern Great Basin](#)

Fuels/Fire Potential

ERCs remain very high for the time of year over much of the northern 2/3 of the Great Basin. Most areas are seeing ERCs in the 80th-90th percentile, and several areas of eastern Idaho, northern Utah into northern Nevada above the 97th percentile, with most of the Great Basin near or above records for the time of year. 1000-hr fuel moisture over nearly all of the Great Basin is below normal and many areas of southern Idaho and the northern half of Nevada and Utah are still near record lows for the time of year. Fuels across southern areas have slowly but steadily dried and now can support fire growth as well.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or just below mid-September normals as low as 65-80% in many areas of Northern Nevada, NW Utah, and far Southern Idaho. Grasses are cured in all areas, with above normal carryover fuel across Northern Nevada and far southern Idaho.

Resources

Aviation within the Great Basin

- 2 VLAT's, 5 LATs, 4 CL-415's
- 20 SEATs, 4 Fire Bosses
- 12 Type 1 Helicopters / 10 Committed
- 11 Type 2 Helicopters / 9 Committed
- 23 Type 3 Helicopters

Crews Committed within the Great Basin

- 23 IHCs Committed / 1 Available
- 36 T-2 IAs Committed / 3 Available
